

USE OF VITA FEED GREEN

1 litre of Vita Feed Green will treat 20 colonies. 250ml will treat 5 colonies.
50ml Vita Feed Green required per complete hive treatment, depending on number of feeds required. Vita Feed Green must be diluted before application.

Shake the product in the original bottle to mix well, before use.

Make a 1% solution of Vita Feed Green in sugar syrup (typically 50% water, 50% sugar) or water. For example, 5ml Vita Feed Green: 495ml sugar syrup = 500ml diluted solution ready for application to the hive. Shake the Vita Feed Green /sugar syrup mixture well.

500ml of diluted solution will treat 1 colony. Feed up to ten times, every other day, or as required.

Colonies are best treated in early Summer, ideally between honeyflow periods or when the supers have been removed.

Vita Feed Green should be stored at temperatures below 25°C.
